Git   Python

Soft Skills

Fast learning   Problem Solver   Team worker   Flexibility

Personal development   Time management   Hard worker

EDUCATION

Full Stack Web Development

HackYourFuture HYF

📅 06/2017 - 07/2018   📍 Netherlands/Amsterdam

Bachelor Chemical Structure.

Aleppo University

📅 09/2010 - 07/2014   📍 Syria/Aleppo

EXPERIENCE

Junior Software Developer

LTP Business Psychologists

📅 07/2019 - Ongoing   📍 Amsterdam

LTP Business Psychologists is one of the leading psychological consultancies in the Netherlands. LTP had an assessment platform where they develops tests. the main focus is to help companies and people to find their best fitting job.

- I have worked at LTP to work on the assessment platform. The platform performs browser-based assessments ranging from personality tests to IQ tests. I have worked on the front-end which is built with React and Redux. It speaks to a micro service architecture that serves up a large rest API. Those tests that participants partake in result in scores. Those scores are displayed to the participant in the form of reports that display the results in graphs and statistics. I have learned a lot about working together with an agile team that consists of front-end and back-end developers, a UX designer, and a product owner. Next to enhancing my skills on the level of javascript and react I learned to pick up user stories made by the product owner. I also learned to team up with back-end developers and give and receive feedback on our implementations to make sure everything comes together in the most optimal manner.

PROJECTS

Replica of the Booking.com

📅 03/2019 - 04/2019

Along with 2 other interns, we built a replica of the Booking.com product, using HTML, CSS/SCSS, Javascript and ReactJS/Redux. The mission was to create a complete user journey starting with an easy search form and present the results that satisfy him/her, with recommendations related to popular cities and hotels based on the ratings.

- In addition, we created an admin panel to give property owners complete access to their listing on the app (e.g., control over properties, reservations, reviews, commission. etc.)
- I worked on:
  →sign in/out pages routing system and admin dashboard.
  →all parts of UI in the product, and made sure all elements respect the design mock-up that we received from our designers.
  → integrating the google maps in the app.
  → arranging daily peer coding and code- reviews with my teammates (which helped us share our knowledge, kept all of us updated about changes).
  →managing rooms to talk and discuss tasks with my team.
  →practicing stakeholder management, updating our supervisor and track mentor with our progress.
- We have presented the Project to Booking Team. They were very enthusiastic about the result and surprised what we had achieved in 6 weeks.

Expensify

📅 02/2019
🔗 https://github.com/moesi88/Expensify-APP.

React application where you can store your own expenses and Get back to it to (add/editing/delete) it.
the stacks that used in this project is:

- React UI.
- Redux (state management).
- Firebase Database/auth).
- Express Server).

HYFER

📅 05/2018 - 06/2018
🔗 https://github.com/HackYourFuture/hyfer

HYFER is an application where all HYF students can follow their course schedule and find an overview of their homework.
HYFER is also useful for HYF's teachers to verify which modules are taught. Students can also receive their train tickets and submit a P2P review of their classmates' homework.

- Technologies used: HTML/CSS, JavaScript, React.js, MySQL.

EXPERIENCE

Front-end Developer Internship

Booking.com

📅 01/2019 - 05/2019   📍 Amsterdam
🔗 https://www.booking.com/

Booking.com is an international website on which citizens can book an accommodation for vacation or travel.

- Participated in an intensive 4month program to increase my front-
  end development skills and be prepared for the job market requirements.
- Collaborated with the team to develop and polish my tech/soft skills.
- Learned new technologies and dived deeper into some concepts such
  as Advanced Javascript, ReactJS, Redux.
- Managed sprints, worked in stand-ups, used Trello and Agile
  environment.

Web-Developer - Intern

Faktor B.V

📅 06/2018 - 01/2019   📍 Amsterdam
🔗 https://www.faktor.io/

The enterprise platform for privacy and consent management

- Collaborating with the team to develop the company products.
- Debugging.
- Learning new technologies required to develop products like AWS, AngularJS.

TRAINING / COURSES

The Complete React Web Developer Course (with Redux).

JavaScript: Understanding the Weird Parts.

Mastering Agile Scrum Project Management

Productivity and Time Management
